xFuse Fiber Strip

- **xFuse Fiber Strip is unique and versatile bone void filler**

comprised of demineralized cortical bone and is offered in an easy to handle boat shape. Our product offer excellent pliability when rehydrated and can be shaped into a fiber putty form-with excellent handling characteristics. Our xFuse Fiber Strip can be rehydrated with surgeons choice of BMA, PRP, whole blood, or saline.

Once hydrated, the pliable fibers provide excellent moldability and handling characteristics that can be shaped and packed or used to fill voids. xFuse Fiber technology offer **osteoconductive** with **osteoinductive** potential as well as provide an outstanding scaffold for bone in-growth.
